

PACSZ1284

IEEE 1284 Parallel Port ESD/EMI/Termination Network

Product Description

The PACSZ1284 combines EMI filtering, ESD protection, and signal termination in a single QSOP package for parallel port interfaces complying to the IEEE 1284 standard.

The PACSZ1284 provides a complete parallel port termination solution. It integrates the equivalent of 60 discrete components, making it ideal for space critical applications. The pins of the device which connect to the parallel port are protected to ± 30 kV contact discharge, well beyond Level 4 of the IEC 61000-4-2 specification. All other pins are ESD-protected for contact discharges up to ± 8 kV per IEC 61000-4-2.

There are two values available for pull-up resistor R1. For the PACSZ1284-02, R1 = 2.2 k Ω ; for the PACSZ1284-04, R1 = 4.7 k Ω .

The PACSZ1284 is housed in a 28-pin QSOP package and is available with RoHS compliant lead-free finishing.

Features

- 17 EMI Filters
- 17 ESD Protectors Yielding Protection to 30 kV Contact Discharge, per IEC 61000-4-2 Specification
- 17 Terminators with Choice of Resistor Values
- 28-Pin QSOP Package
- These Devices are Pb-Free and are RoHS Compliant

Applications

- Parallel Ports of PCs, Printers, Peripherals, and Set-Top Boxes

SPECIFICATIONS

Table 2. ABSOLUTE MAXIMUM RATINGS

Parameter	Rating	Units
V _{CC} Voltage	5.5	V
Input Voltage Range, No Clamping	-0.4 to 5.5	V
Storage Temperature Range	-40 to +150	°C
Power Dissipation per Resistor	0.1	W
Package Power Dissipation	1.0	W

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

Table 3. STANDARD OPERATING CONDITIONS

Parameter	Rating	Units
V _{CC} Voltage	5.0	V
Operating Temperature	-40 to +85	°C

Table 4. ELECTRICAL OPERATING CHARACTERISTICS

Symbol	Parameter	Conditions	Min	Typ	Max	Units
TOL _R	Absolute Resistance Tolerance	Measured at T _A = 25°C			±20	%
TOL _C	Absolute Capacitance Tolerance	Measured at 1 MHz, 2.5 VDC, T _A = 25°C			±20	%
I _{LEAK}	Leakage Current to GND	Measured at 5.0 VDC, T _A = 25°C		1	10	µA
V _{ESDi}	ESD Protection, Input Pins	Pins 3, 4, 5, 6, 7, 9, 11, 13, & 14, per IEC 61000-4-2 Specification (Notes 1 and 2)	±8			kV
V _{ESD}	ESD Protection, Connector Pins	Pins 1, 2, 8, 10, 12, 15, 16, 17, 18, 19, 21, 23, 24, 25, 26, 27, & 28, per IEC 61000-4-2 Specification (Notes 1 and 3)	±30			kV
V _{CLAMP}	Clamping Voltage under ESD Discharge	ESD Applied to Connector Pin, Measured at Corresponding Input Pin; +8 kV Discharge, Human Body Model (Note 1)		8.3		V
		ESD Applied to Connector Pin, Measured at Corresponding Input Pin; -8 kV Discharge, Human Body Model (Note 1)		-2.7		V

- ESD voltage applied between Input/Connector pins and ground, one pin at a time.
- Pins 3-7, 9, 11, 13, and 14 typically connect to the I/O pins of a Super I/O chip.
- Pins 1, 2, 8, 10, 12, 15-19, 21, and 23-28 typically connect to the Parallel Port connector.

PACSZ1284

PERFORMANCE INFORMATION

Filter Capacitors

The IEEE 1284 specification requires both termination and EMI filtering on a total of 17 lines. Basic filtering is provided through the presence of a capacitor on all signal lines. The filter capacitor is the junction capacitance of an ESD diode. The typical capacitance at a reverse voltage of 2.5 V is 150 pF. This diode capacitance is somewhat voltage dependent. See Figure 1.

Figure 1. Diode Capacitance vs. Reverse Voltage

The higher speed Data and Strobe lines (9 in total) require an additional series resistor termination for proper operation, while the eight (8) Status lines do not. See Table 5.

Filter Insertion Loss

Figure 2 shows the typical Insertion Loss graphs of the PACSZ1284 for Data and Strobe signals. The curves are dependent on the physical location of the filter elements with respect to the ground terminal of this device. These graphs are measured in a 50 Ω environment on a Hewlett Packard HP 8753C Analyzer. The signal source is introduced at the resistor input and the output is measured at the corresponding protection diode. The actual pins measured are labeled in the Figure 2 graph.

Figure 2. Typical Filter Insertion Loss

PACSZ1284

APPLICATION INFORMATION

Termination Considerations

The IEEE 1284 specification requires both termination and EMI filtering on a total of 17 signal lines. Control and Status lines (8 in total) only require a pull-up resistor and a filter capacitor. The Data lines and Strobe also require a series termination resistor in addition to the pull-up resistors and filter capacitors. See Table 5, in conjunction with the schematic diagram on page 2.

Table 5. IEEE 1284 TERMINATION REQUIREMENTS

Signal Termination Requirements	
Signal Name	Series Termination
Data1 – Data8	Yes
Strobe	Yes
Init	Not Required
AutoFeedXT	Not Required
Selectin	Not Required
ACK	Not Required
Busy	Not Required
Paper Empty	Not Required
Select	Not Required
Fault	Not Required

Interfacing to IEEE 1284 Connectors

IEEE 1284 defines three interface connectors:

- 1284 A is a 25-pin DB series connector which is the de facto PC standard for the host connection
- 1284 B is a 36-pin, 0.085 inch centerline connector used on the peripheral device
- 1284 C is a new 36-pin, 0.050 inch centerline connector which can be used for both host and peripheral

Figure 3A shows a possible hook-up between the 1284-A connector on a PC motherboard and the PACSZ1284, illustrating how the pin configuration of the PACSZ1284 allows for easy interconnect between the two. The dotted I/O signals of the PACSZ1284 will typically be connected to a Super I/O chip on the motherboard.

Figure 3B shows a possible hook-up between the 1284-B connector on a peripheral and the PACSZ1284

Figure 3C shows a possible hook-up between the 1284-C connector and the PACSZ1284.

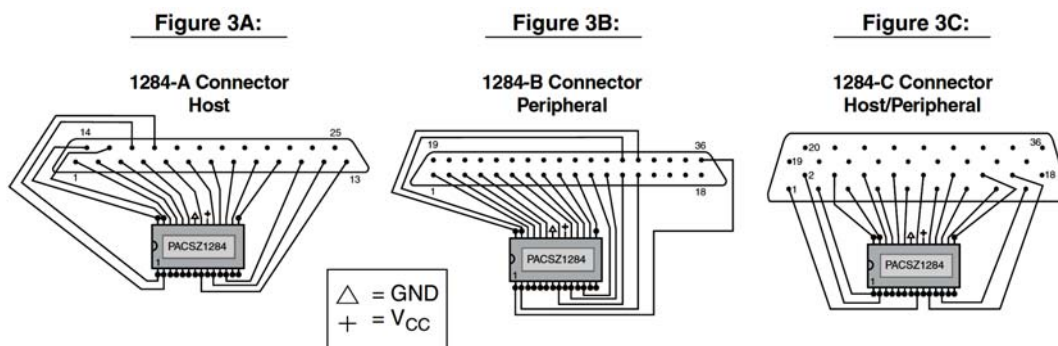

Figure 3. Example Connections of IEEE 1284 Connectors with PACSZ1284

Table 6 provides the IEEE 1284 signal assignments for the three connectors, and example PACSZ1284 pin connections.

When connecting a 1284-A host to a 1284-B peripheral, the “Peripheral Logic High” signal is not used. Similarly, when a 1284-A host is connected to a 1284-C peripheral, the “Peripheral Logic High” and “Host Logic High” are not used. These two signals are optionally used to detect a “Power Off” or “Cable Disconnect” state for host and peripheral, respectively.
