

FDD2582

MOSFET, N-Channel, POWERTRENCH[®]

150 V, 21 A, 66 mΩ

Features

- $r_{DS(ON)} = 58 \text{ m}\Omega$ (Typ.), $V_{GS} = 10 \text{ V}$, $I_D = 7 \text{ A}$
- $Q_g(\text{tot}) = 19 \text{ nC}$ (Typ.), $V_{GS} = 10 \text{ V}$
- Low Miller Charge
- Low Q_{RR} Body Diode
- UIS Capability (Single Pulse and Repetitive Pulse)
- These Devices are Pb-Free, Halide Free and are RoHS Compliant

Applications

- DC/DC Converters and Off-Line UPS
- Distributed Power Architectures and VRMs
- Primary Switch for 24 V and 48 V Systems
- High Voltage Synchronous Rectifier
- Direct Injection / Diesel Injection Systems
- 42 V Automotive Load Control
- Electronic Valve Train System

ORDERING INFORMATION

See detailed ordering and shipping information on page 2 of this data sheet.

FDD2582

MOSFET MAXIMUM RATINGS (T_C = 25°C, Unless otherwise noted)

Symbol	Parameter	Ratings	Units
V _{DS}	Drain to Source Voltage	150	V
V _{GS}	Gate to Source Voltage	±20	V
I _D	Drain Current –Continuous (T _C = 25°C, V _{GS} = 10 V)	21	A
	–Continuous (T _C = 100°C, V _{GS} = 10 V)	15	
	–Continuous (T _{amb} = 25°C, V _{GS} = 10 V, R _{θJA} = 52°C/W)	3.7	
	–Pulsed	See Figure 4	
EAS	Single Pulse Avalanche Energy (Note 1)	59	mJ
P _D	Power Dissipation	95	W
	Derate above 25°C	0.63	W/°C
T _J , T _{STG}	Operating and Storage Temperature	–55 to 175	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Starting T_J = 25°C, L = 1.17 mH, I_{AS} = 10 A.

THERMAL CHARACTERISTICS

Symbol	Parameter	Ratings	Units
R _{θJC}	Thermal Resistance, Junction to Case TO–252	1.58	°C/W
R _{θJA}	Thermal Resistance, Junction to Ambient TO–252	100	
R _{θJA}	Thermal Resistance, Junction to Ambient TO–252, 1 in ² copper pad area	52	

PACKAGE MARKING AND ORDERING INFORMATION

Thermal Resistance vs. Mounting Pad Area

The maximum rated junction temperature, T_{JM} , and the thermal resistance of the heat dissipating path determines the maximum allowable device power dissipation, P_{DM} , in an application. Therefore, the application’s ambient temperature, T_A ($^{\circ}C$), and thermal resistance $R_{\theta JA}$ ($^{\circ}C/W$) must be reviewed to ensure that T_{JM} is never exceeded. Equation 1 mathematically represents the relationship and serves as the basis for establishing the rating of the part.

$$P_{DM} = \frac{(T_{JM} - T_A)}{R_{\theta JA}} \quad (\text{eq. 1})$$

In using surface mount devices such as the TO–252 package, the environment in which it is applied will have a significant influence on the part’s current and maximum power dissipation ratings. Precise determination of P_{DM} is complex and influenced by many factors:

1. Mounting pad area onto which the device is attached and whether there is copper on one side or both sides of the board.
2. The number of copper layers and the thickness of the board.
3. The use of external heat sinks.
4. The use of thermal vias.
5. Air flow and board orientation.
6. For non steady state applications, the pulse width, the duty cycle and the transient thermal response of the part, the board and the environment they are in.

ON Semiconductor provides thermal information to assist the designer’s preliminary application evaluation. Figure 21 defines the $R_{\theta JA}$ for the device as a function of the top copper (component side) area. This is for a horizontally positioned FR–4 board with 1oz copper after 1000 seconds of steady state power with no air flow. This graph provides the necessary information for calculation of the steady state

junction temperature or power dissipation. Pulse applications can be evaluated using the ON Semiconductor device Spice thermal model or manually utilizing the normalized maximum transient thermal impedance curve.

Thermal resistances corresponding to other copper areas can be obtained from Figure 21 or by calculation using Equation 2 or 3. Equation 2 is used for copper area defined in inches square and equation 3 is for area in centimeters square. The area, in square inches or square centimeters is the top copper area including the gate and source pads.

$$R_{\theta JA} = 33.32 + \frac{23.84}{(0.268 + \text{Area})} \quad \text{Area in [in}^2\text{]} \quad (\text{eq. 2})$$

$$R_{\theta JA} = 33.32 + \frac{154}{(1.73 + \text{Area})} \quad \text{Area in [cm}^2\text{]} \quad (\text{eq. 3})$$

Figure 21. Thermal Resistance vs. Mounting Pad Area
